introduction

M.I. ENGINEERING WORKS is a leading manufacturer and supplier of industrial fasteners with over two decades of experience in precision engineering. We are one of the prominent manufacturers, suppliers and exporters of Fasteners, Pipe Fittings, Flanges etc.

We manufacture all these products in various Stainless Steel, Alloy Steel, Carbon Steel, Monel, Inconel, Hastelloy, Titanium, Duplex Steel and Alloy 20, etc. We have the most advanced technologies and qualified and efficient personnel for inspection. We are also associated with Government Approved laboratories to ensure that the materials supplied by us are as per required specification.

With multiple quality checks placed at every step of the manufacturing process, we ensure that only the high quality products of international standards reaches our dedicated packaging unit.

Our basic objective is to cater to the various needs of our clients and provide them with high-quality products for their project needs.

We take pride in satisfactorily meeting the needs of a wide array of industries ranging from civil engineering to infrastructure development and automotive industries, oil and gas industry, Power Generation, Petrochemicals, Pulp and Paper Industry, etc.

We assure our clients will certainly receive quality products and the most reasonable prices and deliveries of our products at the right time with excellent services. Client satisfaction is the award for our good quality and service.

BOLTS

HexBolts,CarriageBolts, Anchor Bolts, U Bolts, Eye Bolts, Flange Bolts, Stud Bolts, Foundation Bolts

Our bolt range encompasses the most critical fastening components for structural and mechanical applications. From standard hex bolts to specialized foundation bolts, each product is engineered for maximum load-bearing capacity and durability. Available in a comprehensive range of grades from 4.6 to 12.9, our bolts are manufactured to meet exacting specifications for tensile strength and shear resistance.

Grades

4.6, 4.8,5.6, 5.8, 6.8, 8.8, 9.8, 10.9, 12.9, A2-70, A4-80, B7, B8

Materials

Mild Steel, Carbon Steel, Alloy Steel, EN8, EN19, EN24, SS202, SS304, SS316, Brass

Standards

DIN931,DIN933, ISO 4014, ASTM A325

NUTS

HexNuts,LockNuts, Nylock Nuts, Flange Nuts, Dome Nuts, Coupling Nuts, Wing Nuts

Our comprehensive nut portfolio includes standard and specialized designs for every industrial application. Hex nuts remain the most widely used fastening component, while lock nuts and nylock variants provide vibration-resistant connections. Flange nuts offer integrated washer functionality, and specialized designs like wing nuts enable hand-tightening applications. Each nut type is available in multiple grades and material specifications to match corresponding bolt grades for optimal performance.

Grades	Materials	Standards
4,5,6,8,10, 12, A2-70, A4-80	MildSteel,Carbon Steel, SS304, SS316, Brass, Bronze	DIN934,ISO4032, ASTM A563

SCREWS

MachineScrews,SelfTapping Screws, Wood Screws, Socket Screws, Drywall Screws, Set Screws

Screws represent a diverse category of fastening solutions designed for specific material types and installation methods. Machine screws are precision-engineered for tapped holes, while self-tapping variants create their own threads in metal and plastic. Wood screws feature specialized thread patterns for timber applications, and socket screws provide recessed drive options for space-constrained installations. Our comprehensive screw range covers all drive types, head styles, and thread specifications required for industrial and construction applications.

Grades
4.8,5.8,8.8, A2-70, A4-70

Materials
MildSteel,Hardened Steel, SS304, Brass

Standards
DIN7985,DIN965, DIN 7981

WASHERS

FlatWashers,SpringWashers,Star Washers, Fender Washers, Square Washers

Washers play a critical role in fastening systems by distributing load, preventing damage, and providing locking mechanisms. Flat washers spread bearing loads across larger surface areas, protecting mating materials from damage. Spring washers and star washers provide dynamic locking through spring tension and serrated edges respectively. Fender washers offer extra-large diameters for thin materials, while specialized square washers serve architectural and structural applications. Our washer range includes both standard and hardened grades for all industrial requirements.

Grades
Commercial, Hardened, Structural

Materials
MildSteel,Carbon Steel, SS304, Brass

Standards
DIN125,DIN127, DIN 9021

ANCHORS

WedgeAnchors,SleeveAnchors, Chemical Anchors, Drop-In Anchors

Anchors provide permanent fastening solutions for concrete, masonry, and other hard substrates. Wedge anchors utilize expansion principles to create secure mechanical connections, while sleeve anchors offer similar performance with different expansion mechanisms. Chemical anchors use epoxy or resin systems to bond threaded rods to substrates, providing superior load capacity and vibration resistance. Drop-in anchors are installed flush with surfaces, creating concealed mounting points. Each anchor type is engineered for specific load requirements and substrate conditions.

Grades	Materials	Standards
5.8, 8.8, 10.9	Carbon Steel,Stainless Steel, Epoxy Resin	ETA, ASTM E488

RIVETS

BlindRivets,SolidRivets, POP Rivets, Structural Rivets

Rivets represent permanent fastening solutions ideal for applications requiring high shear strength and vibration resistance. Blind rivets enable installation from one side, making them perfect for inaccessible joints. Solid rivets require access to both sides but offer maximum strength for structural applications. POP rivets represent a specialized blind rivet design, while structural rivets meet stringent specifications for critical connections. Available in aluminum, stainless steel, and steel alloys, our rivet range serves aerospace, automotive, construction, and manufacturing sectors.

Grades
Commercial, Structural

Materials
Aluminium,Stainless Steel, Steel, Copper

Applications & Quality Standards

Industry Applications

Construction & Infrastructure

Structural steelconnections, foundation anchoring, concrete fastening, bridge construction, and building frameworks requiring high-strength, corrosion-resistant fasteners meeting ASTM and ISO standards.

Manufacturing & Assembly

Production line equipment, machinery assembly, automotive components, and industrial equipment requiring precision fasteners with consistent thread tolerances and load specific ations.

Marine & Offshore

Shipbuilding, offshore platforms, and marine equipment requiring stainless steel and corrosion-resistant alloys meeting marine-grade specifications for saltwater environments.

Quality Assurance

Material Testing

Comprehensivematerial verification including chemical composition analysis, hardness testing, and tensile strength verification to ensure grade specifications are met.

Dimensional Inspection

Precisionmeasurement of thread pitch, diameter, length, and head dimensions using calibrated gauges and coordinate measuring equipment for ISO 9001 compliance.

Performance Testing

Loadtesting, torque verification, and shear strength evaluation to validate performance claims and ensure fasteners meet published specification limits.

Certifications & Standards: Our products comply with international standards including DIN, ISO, ASTM, and ETA specifications. We maintain full traceability from raw material sourcing through final inspection, providing mill test certificates and compliance documentation for quality-critical applications.
